Behavior Modification: Theories and Approaches	CMS Survey Group	This broadcast examines the role of behavior modification strategies that are commonly employed in the long-term care setting. The show emphasizes non-pharmacological interventions, although a general discussion of pharmacological alternatives and their effectiveness is included. The broadcast focuses on five major theories of behavior modification, with discussion and example scenarios for each.	Long-Term Care Administrators	Video	No	90 mins.	Link
Non-Pharmacological treatment of Demented Patients with Problematic Behaviors	Yale University School of Medicine	Workshop on use of non-pharmacological intervention to care for patients with behavior problems due to dementia.	Registered Nurses, Advance Practice Nurses, Residents, Fellows	Case Study/Case Series, Faculty Development	No	Self-Paced	Link
Improving Antipsychotic Appropriateness in Dementia Patients	University of Iowa	This website includes evidence based information and resources to help clinicians, providers, and consumers better understand how to manage "problem behaviors" and psychosis in people with dementia using evidence-based approaches. It includes brief lectures, written content, quick reference guides for clinicians and providers, and information for families or patients on the risks and benefits of antipsychotics for people with dementia (a.k.a. Alzheimer's disease and others). Laminated quick reference guides for use in practice are available on request; these can help put the strategies you learn about into action.	Registered Nurses, Advanced Practice Nurses, Physicians, Physician Assistants, Pharmacists, Social Workers, Direct Care Staff, Students of listed disciplines, Patients and Caregivers	Case Study/Case Series, Evaluation Tool, Independent/Self Directed Learning, Lecture/Presentation, Quick Reference Pocket Cards, Videos, Family Member Resources	Yes and CMEs	120 mins. A Systematic Evidence Review for Non-Pharmacological Interventions for Behavioral Symptoms in Dementia	Department of Veterans Affairs Health Services Research & Development Service / Evidence-based Synthesis Program	This evidence review addresses the key questions: 1) How do non-pharmacological treatments of behavioral symptoms compare in effectiveness with each other, with pharmacological approaches, and with no treatment?, 2) How do non-pharmacological treatments of behavioral symptoms compare in safety with each other, with pharmacological approaches, and with no treatment?, 3) How do non-pharmacological treatments of behavioral symptoms compare in cost with each other, with pharmacological approaches, and with no treatment?	Primarily written for Veterans Affairs managers and policymakers.	Report	No	Self-Paced	Link
Toxic Medicine	California Advocates for Nursing Home Reform	This guide is part of CANHR's Campaign to Stop Chemical Restraints in nursing homes and other long-term care facilities. Ending the misuse of psychoactive drugs is one of CANHR's top priorities because over drugging is a leading cause of misery, neglect and death for residents who suffer from dementia. The Campaign features a one-of-its-kind website where one can join the Campaign, examine drugging rates for each California nursing home, view CANHR's 3-part video series on chemical restraints, learn about better methods of care, read and participate in CANHR's Stop Drugging Our Elders Blog, and much more. Whose Problem is It?	The University of Iowa: College of Nursing	Mental illness is a common problem among nursing home residents, and a primary cause of behavioral management problems for staff. However, threats to mental health may also precipitate "behavioral problems". Both types of problems are briefly reviewed in this introductory program. An emphasis is placed on accurate identification of the underlying causes of the difficult behavior, and on the staff's management of their own feelings about problem behaviors. Back To The ABC's: Understanding and Responding To Behavior and Psychological Symptoms in Dementia	The University of Iowa: College of Nursing	Behavioral and psychological symptoms of dementia are often puzzling, and sometimes are troubling to staff, other residents and family members alike. Compassionate and effective care relies on understanding the problem from the perspective of the person with dementia and accurately assessing a diverse array of factors that may cause or contribute to behavioral symptoms. In this module, the Antecedent-Behavior-Consequence (ABC) model is applied to the care of persons with dementia. By assessing and changing common antecedents (triggers) and consequences (reactions), caregivers are often able to promote comfort and function for individuals with dementia. Dementia Care: The Quality of Chasm	CCAL-Advancing Person-Centered Living	<p>The seminal 2001 Institute of Medicine's (IOM) report, Crossing the Quality Chasm, called for a redesign of the nation's healthcare system, and described healthcare in America as impersonal and fragmented. The IOM report stated that a critical element needed in the redesign was a shift to a person-centered approach moving away from the traditional clinician/disease centered approach. The title of this white paper, Dementia Care Quality Chasm, was purposefully selected as a nod to the IOM's red flag warning about our nation's impersonal and fragmented healthcare systems and practices. Overall, dementia care in this country is impersonal and fragmented, and this paper is a call to action to change to what is considered the gold standard - a person-centered approach. Given the already staggering financial and caregiving demands of dementia, the U.S. is facing significant, if not crippling, societal challenges if effective person-centered systems and practices are not implemented soon to address and better manage the care, services, and supports for people living with dementia and their care partners.</p>	Long-Term Care Staff	PDF File	No	Self-Paced	Link
Hand in Hand: A training Series for Nursing Homes	Centers for Medicare and Medicaid Services	<p>The mission of the Hand in Hand training is to provide nursing homes with a high-quality training program that emphasizes person-centered care in the care of persons with dementia and the prevention of abuse.</p>	Long-Term Care Staff	Toolkit	No	Self-Paced	Link
